Art Unit: 1731

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over SIMINOSKI et al or ROBITAILLE.

The composition of SIMINOSKI et al or ROBITAILLE is the same as that claimed. The term "for use in" does not have probative weight in a product claim. Any difference in percentages would have been an obvious as it is well known to optimize the brightening of pulp by varying the ratios of the composition depending upon the type of pulp being brightened.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-20 are rejected under 35 U.S.C. 103(a) as obvious over EP 622 491 in view of ROBITAILLE in view of Australian Patent 567,787 or SINGH (The Bleaching of Pulp) with or without the ADMITTED PRIOR ART, Specification, page 1, line 23 to page 2, line 13 and page 7, lines 30-35).

Art Unit: 1731

ROBITAILLE teaches everything except does indicate the amount of lignin in the pulp, e.g. does not indicate whether mechanical (greater than 20% lignin) or chemical (less than 5% lignin). Australian Patent 567,787 teaches peroxide bleaching with magnesium and silicate in a similar manner as ROBITAILLE and teaches that the bleaching liquor could be used to bleach chemical pulp. It would have been obvious to one of ordinary skill in the art to use the bleaching and brightening composition of ROBITAILLE to bleach chemical pulp as such is taught by Australian Patent 567,787. Or SINGH teaches that Kraft pulp can be bleached CEDPD bleach sequence. It would have been obvious that the pulp of ROBITAILLE is Kraft chemical pulp as it is being bleached in a conventional sequence that is used to bleach chemical pulp, e.g. not mechanical pulp. If necessary it would have been obvious that the peroxide sequence of ROBITAILLE is being used to bleach chemical pulp as the ADMITTED PRIOR ART teaches that chlorine dioxide darkens pulp (page 2, lines 10-13) and thus the sequence of ROBITAILLE would not be appropriate to bleach mechanical pulp. If necessary the ADMITTED PRIOR ART teaches that chemical pulp has a lignin content of less than 5%. Obviously the chemical pulp of ROBITAILLE and/or Australian Patent 567,787 and/or SINGH would contain less than 5% lignin. Claim 18 is rejected as ROBITAILLE teaches that the peroxide stage could be the final bleach stage, see page 168, column 3. As taught by the ADMITTED PRIOR ART the pulp before the last bleaching (brightening) stage has a lignin content of 1-2%. Obviously the lignin content before the final peroxide stage of ROBITAILLE would contain 1-2% as taught by the ADMITTED PRIOR ART.

Art Unit: 1731

Claims 21-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over ROBITAILLE in view of Australian Patent 567,787 or SINGH with or with the ADMITTED PRIOR ART as applied to claim 8 above, and further in view of TIBBLING et al.

TIBBLING et al teaches increases the peroxide bleaching of chemical pulp by conducting the peroxide bleaching under oxygen gas pressure. It would have been obvious to increase the peroxide bleaching of ROBITAILLE by adding oxygen under pressure as such is taught by TIBBLING et al.

When filing an “**Official**” FAX in Group 1730, please indicate in the Header (upper right) “**Official**” for papers that are to be entered into the file. The “**Official**” FAX phone numbers for this TC 1700 are:

Non-Final Fax: (703) 872-9310
